**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 1 of 62

# 1 Conformance Statement Overview

The VISUCAM Digital Fundus Camera is suitable for photographing, displaying and storing data relating to the retina and surrounding parts of the eye being examined under mydriatic and non-mydriatic conditions. These photographs assist with the diagnosis and follow-up of eye diseases, which can be visually monitored and photographically documented.

The VISUCAM application's DICOM functionality allows to:

- query modality worklist
- archive images
- write and read single DICOM files to and from CD-R/RW, other mass storage devices or network connected file systems

This document is structured as suggested in the DICOM Standard (PS 3.2 Conformance).

| SOP Classes                                | User of Service<br>(SCU) | Provider of<br>Service (SCP) |  |  |  |
|--|--------------------------|------------------------------|--|--|--|
| Transfer                                   |                          |                              |  |  |  |
| Ophthalmic Photography 8 Bit Image Storage | Yes                      | No                           |  |  |  |
| VL Photographic Image Storage              | Yes                      | No                           |  |  |  |
| Workflow Management                        |                          |                              |  |  |  |
| Modality Worklist Information Model - FIND | Yes                      | No                           |  |  |  |

The VISUCAM application does not support DICOM Media Interchange.

## 3 Introduction

# 3.1 Revision History

| Document<br>Version | Author          | Date       | Changes                     |
|---------------------|-----------------|------------|-----------------------------|
| [                   | Patrick A. Nast | 09/06/2019 | Update reflecting Bug fixes |

### 3.2 Audience

This document is written for the people that need to understand how VISUCAM will integrate into their healthcare facility. This includes both those responsible for overall imaging network policy and architecture, as well as integrators who need to have a detailed understanding of the DICOM features of the product. This document contains some basic DICOM definitions so that any reader may understand how this product implements DICOM features. However, integrators are expected to fully understand all the DICOM terminology, how the tables in this document relate to the product's functionality, and how that functionality integrates with other devices that support compatible DICOM features.

#### 3.3 Remarks

The scope of this DICOM Conformance Statement is to facilitate integration between VISUCAM and other DICOM products. The Conformance Statement should be read and understood in conjunction with the DICOM Standard. DICOM by itself does not guarantee interoperability. The Conformance Statement does, however, facilitate a first-level comparison for interoperability between different applications supporting compatible DICOM functionality.

This Conformance Statement is not supposed to replace validation with other DICOM equipment to ensure proper exchange of intended information. In fact, the user should be aware of the following important issues:

- The comparison of different Conformance Statements is just the first step towards assessing interconnectivity and interoperability between the product and other DICOM conformant equipment.
- Test procedures should be defined and executed to validate the required level of interoperability with specific compatible DICOM equipment, as established by the healthcare facility.

# 3.4 Definitions, Terms and Abbreviations

| Abbreviation  | Definition  |  |  |  |
|---|---|--|--|--|
| AE  | Application Entity                                      |  |  |  |
| AET   | Application Entity Title                                |  |  |  |

# 4 Networking

# 4.1 Implementation Model

# 4.1.1 Application Data Flow

The VISUCAM Software works together with the Network Broker. Both software applications are hosted on same machine. Thus the User Interface of the Network Broker can be used by an operator which works with the VISUCAM Application.

In addition to this networked mode the VISUCAM Software offers a DICOM Offline Media Storage service which provides the possibility of writing and reading single DICOM files. It provides an interface to CD-R/RW, other mass storage devices and network connected file systems. The VISUCAM software includes a database for configuring and managing parameters for this Offline Media Storage operation.

#### 4.1.2 Functional Definition Of AEs

#### 4.1.2.1 Functional Definition Of VISUCAM AE

The VISUCAM Digital Fundus Camera is suitable for photographing, displaying and storing data relating to the retina and surrounding parts of the eye being examined under mydriatic and non-mydriatic conditions. These photographs assist with the diagnosis and follow-up of eye diseases, which can be visually monitored and photographically documented.

The VISUCAM application's DICOM functionality allows to:

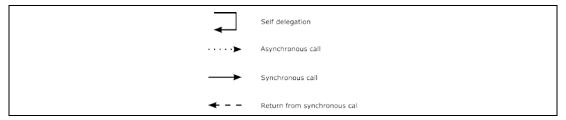

- query modality worklist
- · archive images
- write and read single DICOM files to and from CD-R/RW, other mass storage devices or network connected file systems

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 7 of 62

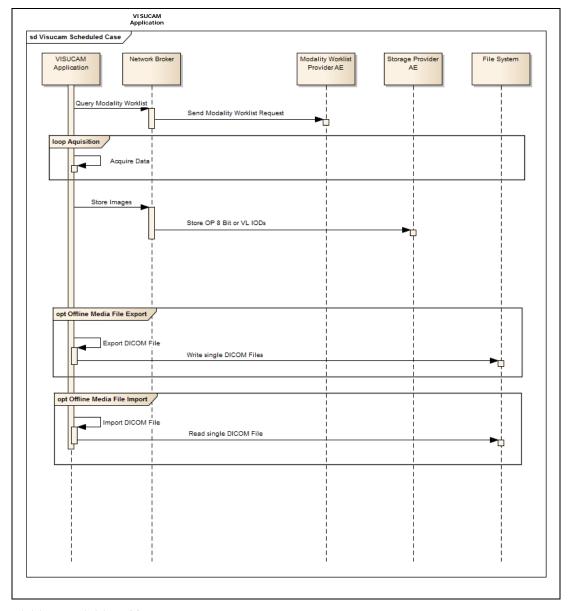

# 4.1.3 Sequencing of Real-World Activities

To realize the real world activities, the different entities work together. The sequence diagrams shall depict the intended workflow.

The diagrams uses slightly modified UML symbols. The asynchronous call is not depicted as suggested in UML. Some objects do have more than one dashed line. It symbolizes more than one thread.

All activities are initiated by an operator.

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 8 of 62

#### **Query Modality Worklist**

When the patient arrives at the VISUCAM, the operator queries the work list. He types in search criteria and gets matches back. Those matches are listed in a table, so the operator can select the correct entry. According to the transferred data VISUCAM creates an entry in the local database (Patient, Study, Visit for the current day). Procedure Step related information is kept temporary in the VISUCAM application.

The operator can now select the patient for data acquisition.

#### Acquire data

The operator acquires data from patient's eye.

#### Store Images

After finishing the examination, the whole Study can be submitted. The operator can initiate sending images at any time to storage entities.

#### Write DICOM Files

This is an optional activity which bypasses the Network Broker interface. The VISUCAM application copies SOP Instances from the local storage to local file export medium. Further on, VISUCAM can write DICOM files to network directories. The supported SOP Class for file export is Visible Light Photographic Image Storage.

#### **Read DICOM Files**

This is an optional activity which bypasses the Network Broker interface. The VISUCAM application reads SOP Instances from a local mass storage medium or from a network directory. The supported SOP Class for file import is Visible Light Photographic Image Storage.

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 9 of 62

# 4.2 AE Specifications

# 4.2.1 Network Broker Application Entity Specification

#### 4.2.1.1 SOP Classes

| SOP Class Name                        | SOP Class UID                    | SCU | SCP |
|---------------------------------------|----------------------------------|-----|-----|
| Verification                          | 1.2.840.10008.1.1                | Yes | No  |
| Modality Worklist Information Model - | 1.2.840.10008.5.1.4.31           | Yes | No  |
| FIND                                  |                                  |     |     |
| VL Photographic Image Storage         | 1.2.840.10008.5.1.4.1.1.77.1.4   | Yes | No  |
| Ophthalmic Photography 8 Bit Image    | 1.2.840.10008.5.1.4.1.1.77.1.5.1 | Yes | No  |
| Storage                               |                                  |     |     |

#### 4.2.1.2 Associations Policies

#### 4.2.1.2.1 General

DICOM standard Application Context Name is DICOM 3.0.

| Application Context Name | 1.2.840.10008.3.1.1.1 |
|--------------------------|-----------------------|
|--------------------------|-----------------------|

#### 4.2.1.2.2 Number of Associations

The number of simultaneous associations results in two since the activities "Query Modality Worklist" and "Store Images" can run in parallel.

| Maximum number of simultaneous associations | 2 |
|---|---|

### 4.2.1.2.3 Asynchronous Nature

Network Broker does not support asynchronous communication (multiple outstanding transactions over a single Association).

### 4.2.1.2.4 Implementation Identifying Information

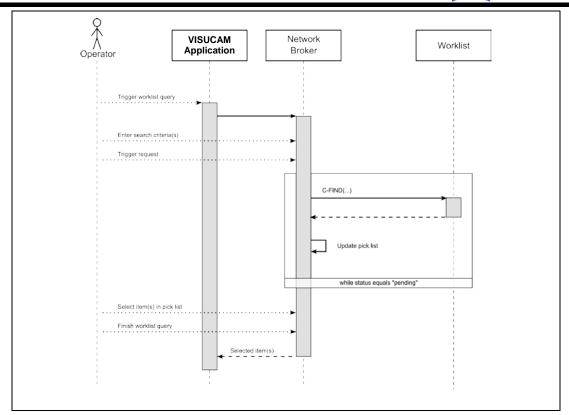

| Implementation Class UID    | 1.2.276.0.75.2.5.10 |  |  |
|-----------------------------|---------------------|--|--|
| Implementation Version Name | 1.3.8.1526          |  |  |

# 4.2.1.3 Association Initiation Policy

## 4.2.1.3.1 Activity - Query Modality Worklist

4.2.1.3.1.1 Description and Sequencing of Activities

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 10 of 62

The activity "Query Modality Worklist" can be triggered at any time during the session by the operator. It is meaningful to perform the query when the patient comes to the modality, then the worklist contains the latest information.

After triggering the worklist query, the operator can fill in search criteria in the shown dialog. The operator triggers the search after having filled in the search criteria. The Network Broker sends a DICOM request, containing the search criteria as matching query keys. Network Broker waits for the response from the remote Application Entity. After receiving the response, Network Broker updates the pick list with the information included in the Modality Worklist response. The pick list instantly shows the received information. The Network Broker will wait for additional responses as long as the Worklist Provider sends a message status "pending" and the number of already received responses does not overstep 50.

After receiving all responses, the operator can select up to a certain number of items to create a new visit for. The number of selectable items can be configured. The operator finally finishes the worklist guery by confirming the selection.

The VISUCAM Application takes over the selected items. For patients who relate to existing data sets of the local database, the VISUCAM Application asks the operator to update or to keep the information. For patients who do not relate to existing data sets, the VISUCAM Application creates new data sets. Data on Patient, Study and Procedure level are kept in the database. After having selected the scheduled patient, the operator can start the examination and acquire images for the respective studies.

The VISUCAM is capable to deal with the first component group of multi-component group names. When the operator triggers a search of a worklist containing multi-component group names the search will be performed using the first component group only. When the response from the modality worklist provider contains a multi-component group name the pick list will show all the three component groups but just the first component group content will be imported at the modality.

#### 4.2.1.3.1.2 Proposed Presentation Contexts

# **Presentation Context Table**

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 11 of 62

| Abstract Syntax     |                        | Т             | ransfer Syntax    | Role | Ext. |
|---------------------|------------------------|---------------|-------------------|------|------|

<sup>(1)</sup> temporary: as long as MWL-patient is in "waiting room list" (2) stored as Physisian of record; DICOM tag (0008, 1048)

The operator can fill in search criteria as query keys. Network Broker offers two input masks for it.

Following tags are editable as search criteria in input mask "Patient Based Query".

| Tag         | Description            |
|-------------|------------------------|
| (0010,0010) | Patients Name          |
| (0010,0020) | Patient ID             |
| (0008,0050) | Accession Number       |
| (0040,1001) | Requested Procedure ID |

Following tags are editable as search criteria in input mask "Broad Query".

| Tag          | Description                         |
|--------------|-------------------------------------|
| (0040,0100)  | Scheduled Procedure Step Sequence   |
| >(0040,0002) | Scheduled Procedure Step Start Date |
| >(0008,0060) | Modality                            |
| >(0040,0001) | Scheduled Station AE Title          |

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 13 of 62

<sup>(3)</sup> stored as Procedure Code Sequence; DICOM tag (0008,1032)

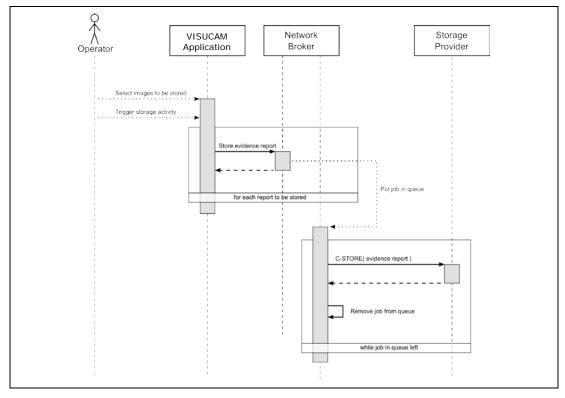

<sup>(4)</sup> in case of MCGN just the first component is imported

<sup>(5)</sup> Only the first value of the multi-value field is copied

# 4.2.1.3.2 Activity - Store images

## 4.2.1.3.2.1 Description and Sequencing of Activities

After finishing the examination, the whole Study can be submitted. The operator can initiate sending images at any time to storage entities.

The VISUCAM Application passes data to the Network Broker. The Network Broker creates immediately DICOM objects and puts a send-job for that DICOM object in a queue. The transmission of the DICOM objects is processed in the background (that means it is performed while operator can continue work with VISUCAM Application).

The storage progress is reflected in a dialog. The operator can even control the storage progress. It's up to the operator if the storage progress dialog is visible or not.

4.2.1.3.2.2 Proposed Presentation Contexts

|                            | Presentation Context Table       |              |                        |      |      |  |  |  |  |  |

|   |   |             | and will be removed from list. |
|---|---|-------------|--------------------------------|
| * | * | Any other   | The job gets an error state.   |
|   |   | status code |                                |

## 4.2.1.4 Association Acceptance Policy

The Network Broker does not accept Associations.

#### 4.3 Network Interfaces

### 4.3.1 Physical Network Interface

The physical network interface is not visible for the applications. The application uses the communication stack as offered by the Operating System.

#### 4.3.2 Additional Protocols

No additional protocols are supported.

# 4.4 Configuration

# 4.4.1 AE Title/Presentation Address Mapping

The mapping from AE Title to TCP/IP addresses and ports is configurable and set at the time of installation by Installation Personnel.

#### 4.4.1.1 Local AE Titles

The IP is not configurable by the Network Broker Configuration Tool. The IP is administrated by the Operating System. The calling AET is configurable. The calling AET is the AET of the Network Broker.

#### 4.4.1.2 Remote AE Titles

The mapping of external AE Titles to TCP/IP addresses and ports is configurable. The Network Broker allows setting up one AE as Modality Worklist Provider and one AE as Storage Provider. For both AEs, the host or IP, the Port and the Application Entity Title must be known.

# 4.4.2 Parameters

# 4.4.2.1 General Parameters

#### 4.4.2.2 Modality Worklist SCU Parameters

The association initiation timeout is configurable. Default is 10 seconds. Additionally, for this service file-based parameters are available. The file-based parameter describes a template for DICOM objects which is used to perform the request. Whenever the operator performs a request, the Network Broker loads the template file and creates a DICOM object of it. Then the application fills in values which were typed in by the operator in the current active input mask. A dedicated file contains template information for the Modality Worklist Query. By default, the file looks like this:

#Specific Character Set

#### 4.4.2.3 Storage SCU Parameters

The association initiation timeout is configurable. Default is 10 seconds.

For VISUCAM the selectable compressions for the IODs are:

- VL Photographic
  - o No Compression
  - o JPEG Baseline Compression
  - JPEG Lossless Compression
- Ophthalmic Photography 8 Bit
  - o No Compression
  - o JPEG Baseline Compression
  - o JPEG Lossless Compression

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc

0

## 4.4.2.4 Offline Media Storage (Import/Export)

## 4.4.2.4.1 Acquisition Context Settings

For switching between Acquisition Context Coding scheme versions, when creating a DICOM File, the following VISUCAM MainU.ini file entry is used:

[Import/Export] VISUPAC=0/1

Meaning:

VISUPAC DICOM Compatibility

VISUPAC 3.5 and older -> Coding Scheme Version VP3.2
 VISUPAC 4.0 and newer -> Coding Scheme Version VP4.0

Default Value: 1

# 4.4.2.4.2 Transfer Syntax Settings

This setting affects DICOM file creation and can be set either via GUI Settings Screen -> Export file format (JPEG compressed check box) or via VISUCAM MainU.ini. Per Default the JPEG compressed check box is unchecked.

[Import/Export]
DICOMTransferSyntax=0/1

Meaning:

1: Little Endian uncompressed -> Transfer Syntax: 1.2.840.10008.1.2
 1: JPEG Baseline compressed -> Transfer Syntax: 1.2.840.10008.1.2.4.50

Default Value: 0

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 18 of 62

# 5 Media Interchange

Media Interchange is not scope of this document since Media Interchange is not supported via Network Broker.

For further information on DICOM Offline Media Storage (export and import) see chapters 4.1.1 Application Data Flow, 4.1.2 Functional Definition Of AEs, 4.4.2.4 Offline Media Storage (Import/Export) and 8.1.1.3 Visible Light Photographic Image (Offline Media Storage).

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 19 of 62

# **6 Support of Character Sets**

In addition to the default character repertoire, the Defined Terms for Specific Character Set in the table are supported.

| Supported Specific Character Set |              |  |  |  |  |
|----------------------------------|--------------|--|--|--|--|
| Character Set Description        | Defined Term |  |  |  |  |
| Latin alphabet No. 1             | ISO_IR 192   |  |  |  |  |

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 20 of 62

# 7 Security

The DICOM capabilities of the VISUCAM Application do not support any specific security measures. It is assumed that VISUCAM Application is used within a secured environment. It is assumed that a secured environment includes at a minimum:

- Firewall or router protections to ensure that only approved external hosts have network access to VISUCAM Application.
- Firewall or router protections to ensure that VISUCAM Application only has network access to approved external hosts and services.
- Any communication with external hosts and services outside the locally secured environment use appropriate secure network channels (e.g. such as a Virtual Private Network (VPN))

  Other network security procedures such as automated intrusion detection may be appropriate in

some environments. Additional security features may be established by the local security policy and are beyond the scope of this conformance statement.

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 21 of 62

## 8 Annexes

# 8.1 IOD Contents

# 8.1.1 Created SOP Instance(s)

The rows of not supported modules are grayed out.

Abbreviations used for presence of values (PoV):

**VNAP** 

Value Not Always Present (attribute sent zero length if no value is present) – Applicable for Type 2, 2C.

**ANAP** 

Attribute is not always present - Applicable for Type 3

**ALWAYS** 

Attribute is always present with a value - Applicable for Type 1

**EMPTY** 

Attribute is sent without a value - Applicable for Type 2

Abbreviations used for sources of data:

**USER** 

Attribute value is generated from user input.

**AUTO** 

Attribute value is generated automatically.

**MWL** 

Attribute value is the same as the value received using a DICOM service such as Modality Worklist

CONFIG

Attribute value is a configurable parameter.

## 8.1.1.3 Visible Light Photographic Image (Offline Media Storage)

The VISUCAM DICOM Offline Media Storage service provides the possibility of writing and reading DICOM files. It provides an interface to CD-R/RW, other mass storage devices and network connected file systems. The following IOD is created when using the DICOM Offline Media Storage service.

| Α. | A.32.4 VL Photographic Image Information Object Definition |                     |           |         |  |  |  |

#### 8.1.1.4 Usage of Attributes from Received IOD's

The usage of attributes of Modality Worklist IODs is described in chapter 4.2.1.3.1 Activity – Query Modality Worklist

## 8.1.2 Attribute Mapping

| Modality Worklist                  | Instance IOD  |
|------------------------------------|---|
| Study Instance UID                 | Study Instance UID  |
| Referenced Study Sequence          | Referenced Study Sequence                                     |
| Accession Number                   | Accession Number  |
| Requested Procedure Description    | Study Description   |
| Requested Procedure Description    | Request Attributes Sequence > Requested Procedure Description |
| Requested Procedure ID             | Request Attributes Sequence > Requested Procedure ID          |
| Scheduled Procedure Step Sequence  | Request Attributes Sequence                                   |
| > Scheduled Procedure Step ID      | > Scheduled Procedure Step ID                                 |
| Scheduled Procedure Step Sequence  | Request Attributes Sequence                                   |
| > Scheduled Procedure Step         | > Scheduled Procedure Step Description                        |
| Description                        |   |
| Scheduled Procedure Step Sequence  | Request Attributes Sequence                                   |
| > Scheduled Protocol Code Sequence | > Scheduled Protocol Code Sequence                            |
| Referring Physicians Name          | Referring Physicians Name                                     |
| Patients Name                      | Patients Name   |
| Patient ID                         | Patient ID  |
| Issuer of Patient ID               | Issuer of Patient ID  |
| Patients Birth Date                | Patients Birth Date   |
| Patients Sex                       | Patients Sex  |
| Other Patient IDs                  | Other Patient IDs 1)  |
| Patient Comments                   | Patient Comments  |
| Requesting Physician               | Physician(s) of Record  |

Only the first value of the multi-value field is copied

#### 8.1.3 Coerced/Modified Files

Those tags are listed in chapter 4.2.1.3.1 Activity – Query Modality Worklist. Other attributes get lost and are not available in the VISUCAM Application.

**Document:** DICOM\_Conformance\_Statement\_VISUCAM\_224\_524\_6.0.6.doc Page 58 of 62

## 8.2 Data Dictionary of Private Attributes

The Private Attributes added to created SOP Instances are listed in the table below. VISUCAM reserves blocks of private attributes in group 7711.

Table 8-1 Private Dictionary Group (7711,00xx) = "99CZM"

Occurs in: Ophthalmic Photography Image SOP Instance, Visible Light Photographic Image SOP Instance

| Tag         | Attribute Name  | VR | VM |
|-------------|-----------------|----|----|
| (7711,00xx) | Private Creator | LO | 1  |
| (7711,xx02) | CZM XML Version | LO | 1  |
| (7711,xx12) | IOD Version     | LO | 1  |

## 8.3 Coded Terminology and Templates

#### 8.3.1 Private Code Definitions

For exact information in fundus images, a few additional parameters, not defined in the OP-IOD nor VL-IOD, are used. These parameters are stored in a private Acquisition Context Sequence as defined below.

The used Coding Scheme Designator is "99HIKO", the Coding Scheme Version is "VP4.0".

Hint: Relative angiography times (FA or ICG) have to be computed as difference between FA start time / ICG start time and Acquisition Datetime (0008, 002A)

| Coding Name    | Coding Type                | Meas. Units Code /<br>Values | Code Meaning / Comments                                 |
|----------------|----------------------------|------------------------------|---|
| PixelWidth     | Numeric Value<br>with Unit | Millimeters                  | PixelWidth of used sensor                               |
| PixelHeight    | Numeric Value<br>with Unit | Millimeters                  | PixelHeight of used sensor                              |
| Sensor         | Concept Code               |                              | Type of sensor  |
| Angle          | Numeric Value<br>with Unit | Degrees                      | Viewing angle in degree                                 |
| Flash          | Numeric Value<br>with Unit | Flash units                  | Flash level of the funduscamera                         |
| Color temp     | Numeric Value with Unit    | Kelvin                       | Color temperature of the internal camera                |
| ISO            | Numeric Value with Unit    | ISO units                    | ISO value of the internal camera                        |
| Contrast       | Numeric Value<br>with Unit | none                         | Contrast value of the internal camera                   |
| Saturation     | Numeric Value with Unit    | none                         | Saturation value of the internal camera                 |
| Focus aid      | Numeric Value<br>with Unit | none                         | Focus aid on or off Value 1 means: Focussing aid was ON |
| Focus position | Numeric Value with Unit    | none                         | Position value of the focus                             |
