# Inspire!

Protecting Sight. Empowering Lives.®

BUILT FOR THE  
NEXT GENERATION.

BUT READY FOR THIS ONE.

Experience Stellaris Elite™—where real-time  
responsiveness enables exceptional control.

**Stellaris Elite**  
Vision Enhancement System

(800) 338-2020 | StellarisElite.com

**Indications:** The Bausch + Lomb Stellaris Elite™ vision enhancement system is intended for the emulsification and removal of cataracts, anterior and posterior segment vitrectomy. The system is designed for use in both anterior and posterior segment surgeries. It provides capabilities for phacoemulsification, coaxial and bimanual irrigation/aspiration, bipolar coagulation, vitrectomy, viscous fluid injection/removal and air/fluid exchange operations. The Stellaris Elite vision enhancement system configured with the laser module is additionally intended for retinal photocoagulation and laser trabeculoplasty. **Contraindications:** All Systems: Use of accessories not designated by Bausch + Lomb for use with this equipment may result in serious permanent patient injury, adverse surgical outcome, or damage to the equipment. Systems with Laser Module: Photocoagulation is not indicated for patients without pigmentation (albino eyes). In addition, Laser Indirect Ophthalmoscope (LIO) is not indicated for cases involving laser photocoagulation within the arcades. **Warnings:** All Systems: Implantable defibrillators present a risk of injury if triggered by a fibrillatory event during intraocular surgery. Electromagnetic interaction between the phacoemulsification (phaco) handpiece and an implanted cardiac pacemaker is unlikely, but cannot be ruled out. Systems with Laser Module: All support personnel who are present during laser treatment must wear appropriate laser protective eyewear. **DO NOT** look directly into the aiming or treatment laser beam. Use of unapproved delivery devices may cause inaccurate laser delivery which could result in serious permanent patient injury. When using the Vitesse™ handpiece: Use only the Entry Site Alignment (ESA) devices provided with the Vitesse handpiece pack (yellow trocar caps). Do not use any ESA with metal components to avoid particulate in the eye. **This is not all you need to know. Systems with Laser Module: Misuse of the laser system may lead to dangerous situations and severe injuries. All Systems: See the appropriate Operator Manual for detailed directions, proper use, and full risk and safety information. See Vitesse handpiece pack Instructions for Use for detailed information on the use of the Vitesse handpiece. CAUTION:** Federal (U.S.) Law restricts this device to sale, by or on the order of a physician.

AAO 2019  
Inspire!

**W**elcome to San Francisco! *EyeNet's Exhibitor Guide* is designed to maximize your time on the show floor. The guide's alphabetical business listings help you quickly identify companies to visit and highlights some of their new products and services. Use the fold-out map to navigate the exhibit floor, and use the notes page in the back to plot your course through the hall or to take notes during vendor meetings. We hope your time at AAO 2019 is productive and enjoyable.

Sincerely,

Dale E. Fajardo, EdD, MBA  
Publisher, *EyeNet Magazine*

## READ AAO 2019 NEWS

Look for *AAO 2019 News* in bins in the Moscone convention center lobbies—and in the Academy Resource Center (Booth W 7337).

**Subspecialty Day edition.** This edition is available Friday-Saturday. See which presentations the Subspecialty Day program directors recommend for a cross-subspecialty audience. Hear from Emily Chew, the Jackson Memorial Lecturer. Learn about Instagrammers at AAO 2019 and about the Academy's new mobile app. Get some background on the "Aseptic Revolution," and more.

**AAO 2019 edition.** Pick up the second edition from Sunday-Tuesday. Read an in-depth profile of the 2019 Laureate, Marilyn T. Miller, MD, MS. Other highlights include an introduction to the Academy President's Guests of Honor, and a feature on the mentors who volunteer with the Academy Minority Ophthalmology Mentoring program. Learn about volunteer opportunities with the Academy, and take a peek inside the first free, publicly accessible, comprehensive museum dedicated to the science of sight: The Truhlsen-Marmor Museum of the Eye.

## ACADEMY RESOURCE CENTER

See the latest products and learn what services the Academy has to offer at the Resource Center (Booth W 7337).

Academy staff members are on hand at the information desk and throughout the booth to answer your questions and help you zero in on the resources that will be most useful for your practice. In addition, *AAO 2019 News* will be distributed in the literature bins.

# HOW TO SAVE WITHOUT COUPONS

Help your patients get affordable eye drops without searching for coupons

Preservative Free Formulations

## TOTALTEARS®

The simple cash pay model of the Total Tears® formulations\* eliminates the need for patients to hunt down coupons and allows for them to purchase their eye drops at affordable prices

Klarity Drops®	10mL	Glycerin and dextran based vehicle ophthalmic solution PF	\$22/bottle
Klarity-A™ Drops	3.5mL	Azithromycin 1% ophthalmic solution PF	As low as \$40/bottle** <small>When purchased as a pack of 3</small>
Klarity-B™ Drops	5.5mL	Betamethasone sodium phosphate 0.1% ophthalmic solution PF	As low as \$40/bottle** <small>When purchased as a pack of 3</small>
Klarity-C Drops®	5.5mL	Cyclosporine 0.1% ophthalmic emulsion PF	\$55/bottle
Klarity-L™ Drops	5mL	Loteprednol etabonate 0.5% ophthalmic solution PF	As low as \$40/bottle** <small>When purchased as a pack of 3</small>

# Superior efficacy. Optimal simplicity.<sup>1,2</sup>

Once-daily Rocklatan<sup>®</sup> significantly lowers IOP in patients with open-angle glaucoma or ocular hypertension—superior to latanoprost and netarsudil at every measured timepoint in phase 3 clinical trials.<sup>1,2</sup>

The first and only once-daily fixed-dose combination of prostaglandin + ROCK inhibitor

Nearly 60% of Rocklatan<sup>®</sup> patients achieved a target pressure of 16 mmHg or less<sup>2</sup>

The majority of ocular adverse events were mild and tolerable, with minimal systemic adverse events<sup>1,3</sup>

Once-daily dosing relieves treatment burden and may improve adherence and treatment outcomes<sup>1,4</sup>

IOP: intraocular pressure; ROCK: rho kinase

Visit [Rocklatan.com](http://Rocklatan.com) to learn more about this innovative drop for elevated IOP

## IMPORTANT SAFETY INFORMATION

### Contraindications

None.

### Warnings and Precautions

- Pigmentation changes
- Eyelash changes
- Intraocular inflammation
- Macular edema
- Herpetic keratitis
- Bacterial keratitis
- Contact lens wear

### Adverse reactions

**Rocklatan<sup>®</sup>:** The most common ocular adverse reaction is conjunctival hyperemia (59%). Five percent of patients discontinued therapy due to conjunctival hyperemia. Other common ocular adverse reactions were: instillation site pain (20%), corneal verticillata (15%), and conjunctival hemorrhage (11%). Eye pruritus, visual acuity reduced, increased lacrimation, instillation site discomfort, and blurred vision were reported in 5-8% of patients.

**Netarsudil 0.02%:** Instillation site erythema, corneal staining, increased lacrimation and erythema of eyelid.

**Latanoprost 0.005%:** Foreign body sensation, punctate keratitis, burning and stinging, itching, increased pigmentation of the iris, excessive tearing, eyelid discomfort, dry eye, eye pain, eyelid margin crusting, erythema of the eyelid, upper respiratory tract infection/nasopharyngitis/influenza, photophobia, eyelid edema, myalgia/arthritis/back pain, and rash/allergic reaction.

Please see brief summary on the adjacent page.

For full Prescribing Information, please visit [Rocklatan.com](http://Rocklatan.com).

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit [www.fda.gov/medwatch](http://www.fda.gov/medwatch) or call 1-800-FDA-1088.

### INDICATIONS AND USAGE

Rocklatan<sup>®</sup> (netarsudil and latanoprost ophthalmic solution) 0.02%/0.005% is approved for the reduction of elevated intraocular pressure (IOP) in patients with open-angle glaucoma or ocular hypertension.

### DOSAGE AND ADMINISTRATION

The recommended dosage is one drop in the affected eye(s) once daily in the evening. If one dose is missed, treatment should continue with the next dose in the evening. The dosage of Rocklatan<sup>®</sup> should not exceed once daily. Rocklatan<sup>®</sup> may be used concomitantly with other topical ophthalmic drug products to lower IOP. If more than one topical ophthalmic drug is being used, the drugs should be administered at least five (5) minutes apart.

**Rocklatan® (netarsudil and latanoprost ophthalmic solution) 0.02%/0.005%  
Rx Only**

**BRIEF SUMMARY**

Consult the Full Prescribing Information for complete product information.

**INDICATIONS AND USAGE**

Rocklatan® (netarsudil and latanoprost ophthalmic solution) 0.02%/0.005% is indicated for the reduction of elevated intraocular pressure (IOP) in patients with open-angle glaucoma or ocular hypertension.

**DOSAGE AND ADMINISTRATION**

The recommended dosage is one drop in the affected eye(s) once daily in the evening.

If one dose is missed, treatment should continue with the next dose in the evening. The dosage of Rocklatan® should not exceed once daily. Rocklatan® may be used concomitantly with other topical ophthalmic drug products to lower IOP. If more than one topical ophthalmic drug is being used, the drugs should be administered at least five (5) minutes apart.

**CONTRAINDICATIONS**

None.

**WARNINGS AND PRECAUTIONS**

**Pigmentation**

Rocklatan® contains latanoprost which has been reported to cause changes to pigmented tissues. The most frequently reported changes have been increased pigmentation of the iris, periorbital tissue (eyelid), and eyelashes. Pigmentation is expected to increase as long as latanoprost is administered.

The pigmentation change is due to increased melanin content in the melanocytes rather than to an increase in the number of melanocytes. After discontinuation, pigmentation of the iris is likely to be permanent, while pigmentation of the periorbital tissue and eyelash changes have been reported to be reversible in some patients. Beyond 5 years the effects of increased pigmentation are not known.

Iris color change may not be noticeable for several months to years. Typically, the brown pigmentation around the pupil spreads concentrically towards the periphery of the iris and the entire iris or parts of the iris become more brownish. Neither nevi nor freckles of the iris appear to be affected by treatment. While treatment with Rocklatan® can be continued in patients who develop noticeably increased iris pigmentation, these patients should be examined regularly.

**Eyelash Changes**

Rocklatan® contains latanoprost which may gradually change eyelashes and vellus hair in the treated eye; these changes include increased length, thickness, pigmentation, the number of lashes or hairs, and misdirected growth of eyelashes. Eyelash changes are usually reversible upon discontinuation of treatment.

**Intraocular Inflammation**

Rocklatan® contains latanoprost which should be used with caution in patients with a history of intraocular inflammation (iritis/uveitis) and should generally not be used in patients with active intraocular inflammation because it may exacerbate inflammation...

**Macular Edema**

Macular edema, including cystoid macular edema, has been reported during treatment with latanoprost. Rocklatan® should be used with caution in aphakic patients, in pseudophakic patients with a torn posterior lens capsule, or in patients with known risk factors for macular edema.

**Herpetic Keratitis**

Reactivation of Herpes Simplex keratitis has been reported during treatment with latanoprost. Rocklatan® should be used with caution in patients with a history of herpetic keratitis. Rocklatan® should be avoided in cases of active herpes simplex keratitis because it may exacerbate inflammation.

**Bacterial Keratitis**

There have been reports of bacterial keratitis associated with the use of multiple-dose containers of topical ophthalmic products. These containers had been inadvertently contaminated by patients who, in most cases, had a concurrent corneal disease or a disruption of the ocular epithelial surface.

**Use with Contact Lenses**

Contact lenses should be removed prior to the administration of Rocklatan® and may be reinserted 15 minutes after administration.

**ADVERSE REACTIONS**

**Clinical Trials Experience**

Because clinical studies are conducted under widely varying conditions, adverse reaction rates observed in the clinical studies of a drug cannot be directly compared to rates in the clinical trials of another drug and may not reflect the rates observed in clinical practice.

**Rocklatan®**

The most common ocular adverse reaction observed in controlled clinical studies with Rocklatan® was conjunctival hyperemia which was reported in 59% of patients. Five percent of patients discontinued therapy due to conjunctival hyperemia. Other common ocular adverse reactions reported were: instillation site pain (20%), corneal verticillata (15%), and conjunctival hemorrhage (11%). Eye pruritus, visual acuity reduced, increased lacrimation, instillation site discomfort, and blurred vision were reported in 5-8% of patients.

Other adverse reactions that have been reported with the individual components and not listed above include:

**Netarsudil 0.02%**

Instillation site erythema, corneal staining, increased lacrimation and erythema of eyelid.

**Latanoprost 0.005%**

Foreign body sensation, punctate keratitis, burning and stinging, itching, increased pigmentation of the iris, excessive tearing, eyelid discomfort, dry eye, eye pain, eyelid margin crusting, erythema of the eyelid, upper respiratory tract infection/nasopharyngitis/influenza, photophobia, eyelid edema, myalgia/arthralgia/back pain, and rash/allergic reactions.

**DRUG INTERACTIONS**

Although specific drug interaction studies have not been conducted with Rocklatan®, *in vitro* studies have shown that precipitation occurs when eye drops containing thimerosal are mixed with latanoprost ophthalmic solution 0.005%. If such drugs are used, they should be administered at least five (5) minutes apart.

The combined use of two or more prostaglandins or prostaglandin analogs including latanoprost ophthalmic solution 0.005% is not recommended. It has been shown that administration of these prostaglandin drug products more than once daily may decrease the IOP lowering effect or cause paradoxical elevations in IOP.

**USE IN SPECIFIC POPULATIONS**

**Pregnancy**

There are no available data on netarsudil ophthalmic solution use in pregnant women to inform any drug associated risk; however, systemic exposure to netarsudil from ocular administration is low. Intravenous administration of netarsudil to pregnant rats and rabbits during organogenesis did not produce adverse embryofetal effects at clinically relevant systemic exposures.

**Animal Data**

Netarsudil administered daily by intravenous injection to rats during organogenesis caused abortions and embryofetal lethality at doses  $\geq 0.3$  mg/kg/day (126-fold the plasma exposure at the RHOD, based on  $C_{max}$ ). The no-observed-adverse-effect-level (NOAEL) for embryofetal development toxicity was 0.1 mg/kg/day (40-fold the plasma exposure at the RHOD, based on  $C_{max}$ ).

Netarsudil administered daily by intravenous injection to rabbits during organogenesis caused embryofetal lethality and decreased fetal weight at 5 mg/kg/day (1480-fold the plasma exposure at the RHOD, based on  $C_{max}$ ). Malformations were observed at  $\geq 3$  mg/kg/day (1330-fold the plasma exposure at the RHOD, based on  $C_{max}$ ), including thoracogastroschisis, umbilical hernia and absent intermediate lung lobe. The NOAEL for embryofetal development toxicity was 0.5 mg/kg/day (214-fold the plasma exposure at the RHOD, based on  $C_{max}$ ).

For latanoprost, in 4 of 16 pregnant rabbits, no viable fetuses were present at a dose that was approximately 80 times higher than the RHOD. Latanoprost did not produce embryofetal lethality in rabbits at a dose approximately 15 times higher than the RHOD.

**Lactation**

There are no data on the presence of netarsudil or latanoprost in human milk, the effects on the breastfed infant, or the effects on milk production. However, systemic exposure to netarsudil following topical ocular administration is low, and it is not known whether measurable levels of netarsudil would be present in maternal milk following topical ocular administration. It is also not known whether latanoprost or its metabolites are excreted in milk. The developmental and health benefits of breastfeeding should be considered along with the mother's clinical need for Rocklatan® and any potential adverse effects on the breastfed child from netarsudil and latanoprost.

**Pediatric Use**

Safety and effectiveness in pediatric patients have not been established.

**Geriatric Use**

No overall differences in safety or effectiveness have been observed between elderly and other adult patients.

**NONCLINICAL TOXICOLOGY**

**Carcinogenesis, Mutagenesis, Impairment of Fertility**

Long-term studies in animals have not been performed to evaluate the carcinogenic potential of netarsudil. Netarsudil was not mutagenic in the Ames test, in the mouse lymphoma test, or in the *in vivo* rat micronucleus test. Studies to evaluate the effects of netarsudil on male or female fertility in animals have not been performed.

Latanoprost was not carcinogenic in either mice or rats when administered by oral gavage at doses of up to 170 mcg/kg/day (approximately 2800 times the recommended maximum human dose) for up to 20 and 24 months, respectively. Latanoprost was not mutagenic in bacteria, in mouse lymphoma, or in mouse micronucleus tests. Chromosome aberrations were observed *in vitro* with human lymphocytes. Additional *in vitro* and *in vivo* studies on unscheduled DNA synthesis in rats were negative. Latanoprost has not been found to have any effect on male or female fertility in animal studies.

## Rethinking glaucoma care with non-incisional MicroPulse® Transscleral Laser Therapy

**Its excellent safety profile and efficacy opens a wider selection of treatable patients. Consider patients with:**

- Maximum tolerated medical therapy and compliance issues
- Pre trabeculectomy, stent or filter
- Failed trabeculectomy, stent or filter
- After cataract surgery with MIGS
- Eyes with compromised ocular surface

[iridex.com/glaucoma](http://iridex.com/glaucoma) · [iridex.com/ao](http://iridex.com/ao)

**Coffee with MicroPulse experts at AAO**

Visit us at **AAO booth 829** to speak with physicians about technique, patient selection, safety, efficacy, and durability

THYROID EYE DISEASE  
MAY LEAVE YOUR PATIENTS  
BEYOND RESTORATION

**TED'S LONG-TERM DAMAGE IS SOMETHING SHE CAN'T COME BACK FROM.**

Since there's a limited window for Active Thyroid Eye Disease, every moment counts.<sup>1,2</sup>

To fight back against the impact of this disease, focus on early diagnosis, active monitoring, and prompt medical intervention.<sup>1,3-5</sup>

To learn more about what to look for, visit [TEDimpact.com](http://TEDimpact.com)

## EYEPLAY EXPERIENCE

Take a break from AAO 2019 courses at the Academy's EyePlay Experience, Booth S 2349, Saturday through Monday. Check it out to:

- give back to the community;
- recharge your mobile device;
- relieve stress with comfort animals;
- challenge a colleague to table tennis; and
- get assistance at the Tech Bar.

## SCAVENGER HUNT

Use the Mobile Meeting Guide to participate in the EyeSpy Scavenger Hunt.

Look for the Academy Resource Center as the destination for one of your clues.

# EyeNet Corporate Lunches

Make the most of your time between sessions at AAO 2019! Attend a free corporate educational program lunch\* at the Marriott Marquis, San Francisco.

## Golden Gate Ballroom A

Marriott Marquis  
780 Mission St., San Francisco

## Check-in and Lunch Pick-up

12:15-12:30 p.m.  
Lunches are provided on a first-come basis.

## Program

12:30-1:30 p.m.

## Programs
